# Chapter 1

## 微分方程数值解

Problem 1 (带初值常微分方程)

$$\begin{cases} \frac{dy}{dx} = f(x, y) \\ y(0) = y_0 \end{cases} \quad (1.1)$$

### 1.1 龙格库塔 (Runge Kutta)

#### 1.1.1 四阶龙格库塔

---

**Algorithm 1** 四阶龙格库塔

---

**Require:**  $f, y_0, h, n$

```
1: for  $i = 0, 1, \dots$  do  
2:    $k_1 = f(x_i, y_i)$   
3:    $k_2 = f(x_i + \frac{1}{2}h, y_i + \frac{1}{2}k_1h)$   
4:    $k_3 = f(x_i + \frac{1}{2}h, y_i + \frac{1}{2}k_2h)$   
5:    $k_4 = f(x_i + h, y_i + k_3h)$   
6:    $y_{i+1} = y_i + \frac{1}{6}(k_1 + 2k_2 + 2k_3 + k_4)h$   
7: end for
```

---

求解微分方程组.

## Chapter 2

# 最优化算法

Problem 2 (无约束极小化)

$$\min_x f(x) \quad (2.1)$$

### 2.1 停止准则

### 2.2 步长

#### 2.2.1 Backtracking Search

### 2.3 直接搜索

指无需对目标函数求导的搜索方法, 比如文献 [4] 中的方法.

#### 2.3.1 单纯形法 (Simplex Search Method)

### 2.4 梯度法 (Gradient Method)

#### 2.4.1 梯度法 (Gradient Descent Method)

梯度法或称梯度下降法.

#### 2.4.2 加速邻近梯度法 (Accelerated Proximal Gradient Method)

此方法由 Nesterov[2] 首先提出. 其中,  $\theta_{k+1} \in (0, 1)$  见文献 [1] 91 页. 当  $q = 1$  时, 该算法为梯度法.

**Algorithm 2** 梯度法**Require:**  $x_0 \in \mathbf{R}^n$ 

- 
- ```

1: for  $k = 0, 1, \dots$  do
2:    $x_{k+1} = y_k - t_k \nabla f(y_k)$ 
3: end for

```
- 

**Algorithm 3** 加速邻近梯度法 [2, 1](APG)**Require:**  $x_0 \in \mathbf{R}^n, y_0 = x_0, \theta_0 = 1, q \in [0, 1]$ 

- 
- ```

1: for  $k = 0, 1, \dots$  do
2:    $x_{k+1} = y_k - t_k \nabla f(y_k)$ 
3:    $\theta_{k+1}^2 = (1 - \theta_{k+1})\theta_k^2 + q\theta_{k+1}, \theta_{k+1} \in (0, 1)$ , 求解  $\theta_{k+1}$ 
4:    $\beta_{k+1} = \theta_k(1 - \theta_k)/(\theta_k^2 + \theta_{k+1})$ 
5:    $y_{k+1} = x_{k+1} + \beta_{k+1}(x_{k+1} - x_k)$ 
6: end for

```
- 

**2.4.3 自适应重启加速梯度法**

加速邻近梯度法 (算法3) 迭代到一定程度时, 外推系数  $\beta_k$  趋于 0, 算法退化成梯度法 (算法2). 使用该算法自适应的重置参数, 能够保持加速邻近梯度法的快速收敛.

**Algorithm 4** 自适应重启加速梯度法 [3]**Require:**  $x_0 \in \mathbf{R}^n, y_0 = x_0, \theta_0 = 1$ 

- 
- ```

1: for  $j = 0, 1, \dots$  do
2:   取  $q = 0$  执行算法3, 直到  $f(x_k) > f(x_{k-1})$  时停止 (或可以在
      $\nabla f(y_{k-1})^T(x_k - x_{k-1})$  时停止, 两者选其中一种)
3:    $x_0 = x_k, y_0 = x_k, \theta_0 = 1$ 
4: end for

```
- 

**2.5 牛顿法及拟牛顿法****2.5.1 Broyden–Fletcher–Goldfarb–Shanno Algorithm(BFGS)**
